DIRECTIONS FOR USE:

Talstar Select may be applied either as an incorporation, as a topical application, or as a high volume drench treatment.

Incorporation: Incorporate the appropriate volume of Talstar Select (see table below) per cubic yard of potting media by diluting it in water (typically 1 quart to 1 gallon per cubic yard of media) and sprinkling or spraying it onto the media. The applications are based on the dry bulk density of the potting media. Use the higher volume of concentrate for heavy infestations.
